

# ReefBase Pacific Information Portal

## Livelihoods • Fisheries • Biodiversity

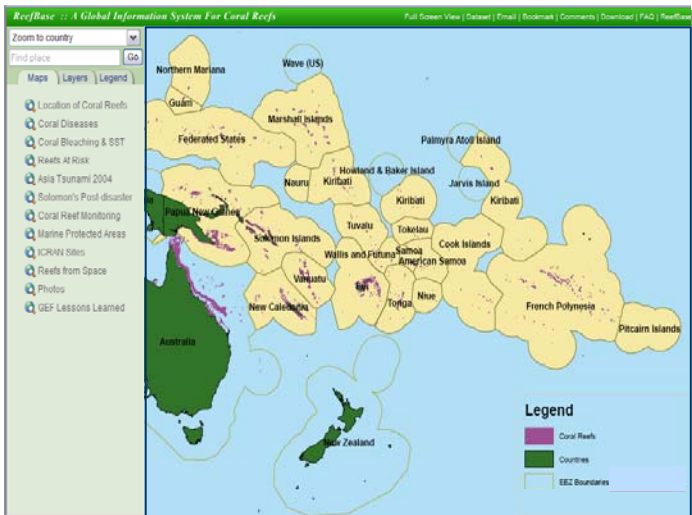

### Project Overview

The ReefBase Pacific project aims to improve quality and accessibility of data and information on reef-associated livelihoods, fisheries and biodiversity. The project has generated internet, DVD and printed formats of the information to facilitate distribution and accessibility across a wide range of stakeholders and users.

ReefBase Pacific is the first regional focus of the global ReefBase project (<http://www.reefbase.org>) and provides a unique collection of information for the Pacific region. This project is a component of the Coral Reef Initiatives for the Pacific (CRISP) (<http://www.crisponline.net>), executed by the WorldFish Center (<http://www.worldfishcenter.org>) and funded by the Agence Française de Développement and the United Nations Foundation.

### Internet Database

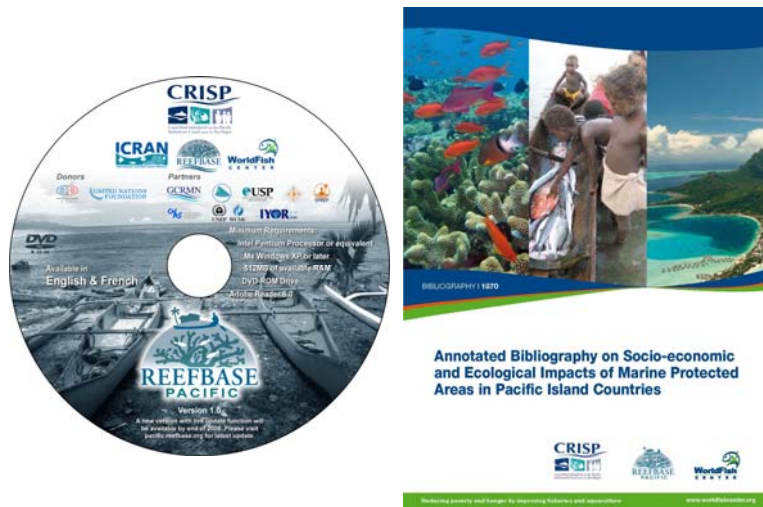

The WorldFish Center and ReefBase are pleased to announce the launch of the ReefBase Pacific website (<http://pacific.reefbase.org>). This new online database contains extensive information specifically related to the status, use, management and knowledge of reef resources in the Pacific region. Accessible through this website is a wide range of published and grey literature (including downloadable pdf files), images, spatial information (GIS-maps) and Pacific reef project summaries and project contacts. The website is available in both French and English, and also contains information in a variety of languages spoken in the Pacific.

A GIS-based module including country profiles may also be found on the website (<http://reefgis.reefbase.org>). Other features of the website include a ToolBox for reef managers, with species profiles, manuals and guidelines.

### Other Information Outputs

The ReefBase Pacific project has also developed a variety of additional information products which have been specifically designed to meet the needs of researchers, educators, resource managers and policy makers in the region. Such products include (above) a standalone and updatable DVD and an annotated bibliography available in hard copy and e-file.

If you wish to receive a DVD, a bibliography or further information please contact [reefbase@cgiar.org](mailto:reefbase@cgiar.org)
